

# Outdoor Grow Calendar

## A Basic Guideline

**Indoor Germination:** 15 July – 30 September

**Move Outdoor:** 15 August – 15 November

**Pruning / Topping:** 15 November – 30 January

**Flowering:** 15 January – 15 March

**Harvest:** 15 March – 30 June

**Note:** Indoor grow can be year-round, within a controlled environment and with the use of supplementary lighting.

Growth stage	Hours of light	Hours of darkness
Seedling	16-24	8-0
Clone	18-24	6-0
Vegetative	18	6
Flowering	12	12

## Cannabis Light Cycle 12-12

- 12-12 Simply refers to the hours of light and darkness a cannabis plant is exposed to – 12 of each.
- Typically, a cannabis plant is exposed to an 18-6 light cycle.
- This tells the cannabis plant conditions are good for growth, and it focuses on building up size and foliage.
- When light cycle is changed to 12-12 (either naturally or through human intervention), it tells the cannabis plant the seasons are changing, and it is time to flower.
- By forcing a 12-12 light period, the cannabis plant goes directly into flowering.

# Canna Pods

## Grow Your Green!

Tending to the **Canna Pods** with the Hydroponic **Canna Smart Garden**.

Discover the future of cannabis cultivation with our state-of-the-art **Canna Pods!**

Whether you're a first-time grower or an experienced enthusiast, our innovative **Canna Smart Garden** with 3 pre-seeded **Canna Pods**, makes it easy to grow top-quality Cannabis at home.

With controlled environments, energy efficiency, and everything you need at your fingertips, success is just a **Canna Smart Garden** away.

Start growing *SMARTER*, not harder!
